Revised 28 February, 2018

Auxiliary Fuel Port Connector Service Kit

Revision	Update	Revision Date
Q-196R2	• Added 2016 MY and later F650/750	28 February, 2018

Models Affected:

- 2011 and later MY F 350/450/550 Chassis Cab (narrow-frame), diesel or gas engine with aft-axle or mid-ship fuel tank or with dual-tank option.
-2016MY and later F650/750, all fuel tanks.

Procedure:

To use the auxiliary fuel port on the F350-550 aft of axle or mid-ship fuel tank, or F650/750 fuel tank Fuel Delivery Module (FDM), a service kit can be obtained from your local Ford dealership parts department. The service kit number is:

9C2Z-9B210-A

The kit includes a quick connector, a clamp and tag. Install this kit to allow an application (such as a generator) to use fuel from the fuel tank. Return fuel to be routed back to tank through fuel fill on F350-550 vehicles.

Note: There is no provision for fuel return on F650/750 tanks due to fuel tank configuration.

Please reference the respective vehicle workshop manual for information regarding the fuel system.
